4 ALLOW WEBREQUEST

5 ACTIVATE

6 VERIFY & MONITOR

Version 1.0 | 20 November 2026

www.afs-id.com

AFSID Group International | Professional Expert Advisor Development

01 / START HERE

Choose the right platform

Begin with your product name, platform and registered trading account. AFSID MT4 and MT5 files are not interchangeable.

YOUR PRODUCT	PLATFORM	PRIMARY FOCUS
AFSID Quantum Trade+ AI	MT5	Flagship multi-market system
AFSID Trading Central Pro-X	MT5	Multi-market trading
AFSID Metal Hunter Pro-X	MT5	Gold / selected metals
AFSID Pro Global Investment	MT4	Classic MT4 system

Your five-minute preparation checklist

- Official license email with your Client / Order Reference, account number and ActivationCode.
- Correct MetaTrader platform and a working broker login with trading permission (not investor/read-only).
- Official EA file (.ex4 for MT4, .ex5 for MT5), product instructions and optional settings file (.set).
- Supported trading symbol and timeframe, reliable internet, and preferably a Windows VPS.
- Sufficient account balance, margin and broker conditions for your licensed product.

IMPORTANT
Use the exact product shown in your license email. MT4 files cannot run in MT5, and MT5 files cannot run in MT4.

Quick setup route

Match product -> Install terminal -> Sign in -> Copy EA -> Allow WebRequest -> Enter license -> Verify status.

02 / PREPARE

Official files and account access

Gather the required details before touching the EA settings. Correct identification prevents most installation errors.

01

Check the official email

Confirm client name, AFSID product, license package, REAL/DEMO account number, broker server and the activation code. One code is tied to its specified account and product.

02

Obtain the correct EA package

Use the verified download link in your official AFSID email, product page or client support channel. Do not install an EA from unknown sharing sites.

03

Verify your broker account

Have your account number, trading password and exact server name ready. An investor password normally permits viewing but not live order execution.

04

Choose a safe environment

Use a Windows PC or VPS. Test a new installation on a demo account first, then review all risk limits before live use.

NEVER SEND A TRADING PASSWORD

AFSID support may ask for product, account number and diagnostic logs. Never email your account password, VPS password, or one-time authentication code.

Official AFSID reference pages

- Platform information: www.afs-id.com/download-mt4-mt5/
- License information: www.afs-id.com/license-guide/
- Installation on VPS: www.afs-id.com/ea-installation-on-vps/

03 / PLATFORM

Install MetaTrader and sign in

Always install MetaTrader on the same computer or VPS where the Expert Advisor will run.

01

Install MT4 or MT5

Obtain the platform installer from your broker's official client area or another verified source. Select MT4 only for Pro Global Investment; use MT5 for the other three AFSID products.

02

Connect to your broker

In MetaTrader, open File > Login to Trade Account (or its equivalent). Enter the registered trading account number, your trading password and the exact server name.

03

Check connectivity

Verify prices update in Market Watch, the connection indicator is active, and the account balance matches your broker account. Confirm the account is REAL or DEMO as licensed.

04

Prepare the symbol

Open Market Watch, show available symbols, and select the exact broker name such as XAUUSD or XAUUSD.suffix. Use only symbols permitted for your product.

IF THE TERMINAL SHOWS 'READ ONLY'
You may be logged in with an investor password or a restricted account. Trading permission must be resolved with your broker before enabling the EA.

Timeframe

For the current MT5 flagship/Pro-X master builds, the EA is intended for **M15**. Other releases may differ. Always follow the timeframe specified in your own product/version instructions.

04 / INSTALL EA

Copy the Expert Advisor file

Do not edit code or change file extensions. Follow the procedure for your actual platform.

ACTION	METATRADER 4	METATRADER 5
Open data folder	File > Open Data Folder	File > Open Data Folder
Open EA folder	MQL4 > Experts	MQL5 > Experts
Supported executable	.ex4	.ex5
Make EA visible	Navigator > Expert Advisors > Refresh	Navigator > Expert Advisors > Refresh

01

Copy the supplied EA

Paste the official compiled .ex4 or .ex5 into the correct Experts directory. If you received a ZIP, extract it first. Keep any required supporting files in their instructed locations.

02

Refresh Navigator

Return to MetaTrader and right-click Expert Advisors in Navigator, then select Refresh. Restart MetaTrader if the EA does not appear.

03

Open the chart

Choose a permitted symbol in Market Watch, open its chart and select the instructed timeframe before attaching the EA.

04

Attach one EA to the chart

Drag the correct AFSID EA from Navigator onto the chart. Confirm the name displayed in the settings window matches your purchased product.

SOURCE FILES

Files ending in .mq4 or .mq5 are source code. Clients should normally use the provided compiled EA; source compilation is not required for routine installation.

05 / CONNECT

Allow the AFSID WebRequest URL

Current AFSID license-monitoring releases require secure communication with the official AFSID website. Configure this before activation.

01

Open MetaTrader options

In the terminal choose Tools > Options > Expert Advisors. This menu exists in both MetaTrader 4 and MetaTrader 5.

02

Enable the WebRequest list

Tick the option labelled Allow WebRequest for listed URL (wording can vary slightly by platform version).

03

Add the exact trusted URL

Click Add or the plus control and enter **https://www.afs-id.com** exactly. Do not enter a WordPress admin URL or a URL copied from an unknown message.

04

Save and re-check

Press OK. If the EA was already loaded before the permission change, remove and re-attach it or restart MetaTrader, then verify the connection status again.

COPY EXACTLY

https://www.afs-id.com

Include https://, avoid spaces, and do not replace 'www' with another hostname unless official instructions for your exact release explicitly require it.

Why this matters

- License activation and remote status checks may fail without this permission.
- Remote REVOKE / RESTORE information requires a successful server check.
- WebRequest is not a request for your broker password; the EA validates its signed license code.

06 / ACTIVATE

Enter your personal activation code

Your licensed code belongs to a specific AFSID product and account. Keep it confidential.

01

Open the EA Inputs tab

When attaching the EA, open Inputs and locate the field normally named ActivationCode. The exact location or spelling may vary on an older MT4 release.

02

Paste the matching code

Copy the full value from your official AFSID license email. Do not add spaces, edit the characters, or use a code from another AFSID product.

03

Check your trading account

Confirm the login number and REAL/DEMO type match the email. A code issued for one account cannot be transferred automatically to another account.

04

Confirm active status

Click OK and inspect the EA chart panel and Experts/Journal log. Look for valid/active license status and a working server connection.

PRODUCT	CURRENT CODE FAMILY	PLATFORM
Quantum Trade+ AI	AFQ26	MT5
Trading Central Pro-X	AFC26	MT5
Metal Hunter Pro-X	AFM26	MT5
Pro Global Investment	AFP26 (new License Center)	MT4

OLDER MT4 BUILDS

An older MT4 release may use an earlier license format. Use the code and instructions issued for the installed EA version; do not substitute a modern AFP26 code into an incompatible older build.

07 / RUN

Attach, configure and verify

Activation alone does not guarantee that new orders will open immediately. The EA may wait for valid market conditions and safety rules.

01

Enable automated trading

On MT4 enable AutoTrading; on MT5 enable Algo Trading. Also allow automated trading in the EA's Common tab. Keep DLL import disabled unless your verified product explicitly requires it.

02

Review official inputs

Check lot size, symbol, trading direction, MaxTrades, spread/risk guards, daily target and permitted timeframe. Use the official product preset; do not increase risk settings without understanding exposure.

03

Check the visual panel

Verify product identity, account number, license status, server link, symbol, open positions and daily-target information. Appearance differs by product; Quantum uses a premium flagship cockpit.

04

Inspect the log

Open Toolbox/Terminal > Experts and Journal. If trading is blocked, copy the exact message rather than guessing. A 'WAIT' status can mean a safety filter is working correctly.

ONE CHART, ONE EA

Use a separate chart for each intended symbol/EA instance. For multiple products on one account, confirm distinct license codes and the proper MagicNumber settings to avoid managing the wrong positions.

Before first live trading

- Confirm real/demo, broker server, product, license, symbol and M15 or instructed timeframe.
- Check available margin and current spreads; avoid assuming demo execution equals live execution.
- Verify the computer/VPS clock and network connection are stable.

08 / VPS

Keep the EA operating on a VPS

A Windows VPS is recommended for consistent uptime, especially where money-based exits and server monitoring require a running terminal.

01

Connect by Remote Desktop

Open Remote Desktop Connection, enter your VPS IP address and sign in with credentials provided by your VPS host.

02

Install the trading terminal

Download the correct MT4/MT5 instance inside the VPS. Then repeat the broker login, EA copy, WebRequest and activation steps in this manual.

03

Keep MetaTrader running

Leave the terminal open and Algo Trading/AutoTrading enabled. Disconnect the Remote Desktop session without signing out of Windows or closing MetaTrader.

04

Check after every restart

Verify broker connection, EA attachment, active license, WebRequest permission, account type and automatic trading after Windows or VPS maintenance.

VPS OPERATIONS

Monitor RAM/CPU, internet latency and disk space. A VPS helps continuity but cannot guarantee order execution, availability or profits.

Daily monitoring routine

- Check connection, equity, free margin, open positions and floating drawdown.
- Review Experts/Journal for trade rejections, license problems and connectivity errors.
- Confirm Windows update, VPS reboot or RDP disconnect did not stop the trading terminal.

09 / UNDERSTAND

Take Profit, risk guards and license status

Understanding the EA's operating model helps you distinguish normal waiting from a genuine problem.

Money-based Take Profit

Some AFSID builds use **BasketTPMode = MONEY**. In this mode, the broker's T/P column may stay blank because the EA checks profit in account currency and closes qualifying baskets itself. The terminal and EA must remain running for this software-managed exit to execute.

Separate BUY and SELL sides

On compatible two-way builds, BUY and SELL may have separate basket profit targets. A profitable SELL does not necessarily mean that the combined account floating P/L is positive. Always confirm the product's exact TP mode and log if an expected close does not happen.

Why an EA may pause entries

- Weekend or daily guard, news/volatility filter, spread limit or unsupported market hours.
- Daily target reached, risk pause, missing chart history, account/symbol restriction or license review.
- Insufficient margin, trading disabled, broker rejection or an unsupported account configuration.

Remote license REVOKE / RESTORE

The new License Center distinguishes products and account numbers. A revoked license can block **new entries**; compatible releases may continue managing existing exits while the terminal remains active. Do not assume that revocation automatically closes all open positions. Contact AFSID support for the exact behavior of your EA build.

> **RISK WARNING**
> Automated trading can incur substantial losses and floating drawdown. No profit, recovery speed or maximum loss is guaranteed. Always review product risk limits and monitor your account.

10 / TROUBLESHOOT

Find and solve common setup problems

Use the symptom and the corresponding checks below. Keep a screenshot of the Experts/Journal message if the issue persists.

SYMPTOM	CHECK / NEXT STEP
EA not in Navigator	Check the MQL4/Experts or MQL5/Experts folder, extension, Refresh, then restart the terminal.
License invalid / account mismatch	Verify product, code, account number, REAL/DEMO type, expiry and correct installed EA build.
WebRequest required / server offline	Allow https://www.afs-id.com, check HTTPS internet connection, firewall and re-attach the EA.
EA loaded but no new trades	Check Algo Trading, chart symbol/timeframe, guards, spread, margin, order limits and Experts log.
T/P column is blank	If using Money TP this may be intentional. Keep EA online; inspect close attempts and live net profit.
Profit target crossed but no close	Check EA Inputs, Experts/Journal errors, trading permission and broker rejection codes. Contact support promptly.
EA displays REVOKED / EXIT ONLY	Check the exact product/license record with AFSID support; do not assume existing positions have been closed.
VPS restart / disconnection	Reconnect, verify the terminal is running, charts loaded, auto trading enabled and license connection restored.
Broker symbol not found	Show all Market Watch symbols; inspect suffixes and confirm the asset is permitted for this product.

DO NOT FORCE CHANGES
If a live account has open positions, avoid removing the EA, switching TP modes, changing MagicNumber or restarting the VPS without first understanding how those positions are managed.

11 / SUPPORT

Final checklist and official assistance

Complete this short verification before considering your Expert Advisor installation finished.

- Correct AFSID product and matching MT4/MT5 platform.
- Correct broker trading login/server, chart symbol and specified timeframe.
- Official EA installed and visible under Navigator > Expert Advisors.
- WebRequest permission includes https://www.afs-id.com.
- ActivationCode accepted; client/account identity and server link verified.
- AutoTrading/Algo Trading enabled; account risk and margin checked.
- Experts/Journal free of unresolved critical errors; VPS remains running if used.

What to send AFSID support

Product/version, Client / Order Reference, MT4/MT5 platform, broker/server, account number (you may mask digits in public screenshots), symbol/timeframe, what happened and when (WIB), and relevant Experts/Journal lines. **Never include passwords, private keys or full activation codes in public messages.**
